

## EMS2017 Cadaver Laboratory Invitation

### Procedural Cadaver Lab

The skills that are often required to resuscitate the critically ill are often not utilized in the best way or in a timely fashion due to the lack of practice, inexperience with procedures or equipment, or unfamiliarity with advances in equipment or techniques.

This lab uses cadaveric teaching to impart knowledge in a low stress environment. Teaching is carried out by internationally renowned clinical instructors, using actual tissue, making this a conducive learning environment. Unembalmed cadavers are used to replicate a true clinical experience.

Participants will have the opportunity to practice several procedural skills including direct and video laryngoscope intubation, surgical cricothyroidotomy, intraosseous access and needle thoracostomy.

EMS2017 Procedural Cadaver Lab

- **Sunday, 21 May 2017**  
**8:00–12:00 or 13:30–17:30**
